RETAIL CATALOG

---OF-----

VEGETABLE SEEDS

TO THE SEED BUYING PUBLIC:

T IS with pleasure we present this Retail Seed Catalog. It has been prepared and printed largely for the use of market gardeners and others who plant bulk seeds. It is not especially intended for the amateur or one who wishes to test novelties.

Our Seeds.—We trust we shall not fall into the folly of so many catalog seedsmen of claiming that no other seeds put on the market have the worth of our seeds; that there are none others so pure, so strong in vitality, or will produce as many bushels or pounds to the acre, and so on through a long list of misleading superlatives. Neither is this catalog filled up with illustrations of impossible vegetables, nor filled with expressions more suitable for a circus poster than for a legitimate seed catalog. We trust we recognize the fact that there are other good seedsmen and other good seeds as well as ours. The beneficent Creator sends the rain and sunshine on their fields as well as ours, but we do want to assure the seed buying public that it will find our seeds as good and pure and reliable as the best. With our nearly twenty years experience as growers, and with our excellent facilities for caring for and cleaning seeds, our method of testing, we are putting out to the merchants only choice seeds—pure, strong, healthy—and he who plants them may rest assured that in so far as the seeds have to do with it he will reap abundant crops.

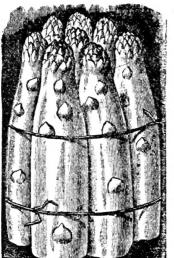

Cheap, unreliable seeds are dear as a gift. Don't risk your crop by buying them. Our seeds can be depended on as to growing and quality.

SIOUX CITY SEED AND NURSERY CO.

SIOUX CITY, IOWA

VEGETABLE SEEDS

ASPARAGUS

Culture-Sow the seed thinly in rows one foot apart in April or May, and keep down all weeds. To secure strong, healthy plants, thin out the seedlings to three or four inches in the rows, saving only the strongest. The one-year-old plants should be set out in the spring, in a rich sandy loam, dug eighteen inches deep, into which has been worked plenty of well rotted manure. If a stiff clay soil is all that can be had add plenty of sand and sifted coal ashes to loosen it up, and also see that it is well underdrained. In planting for private use, set out in beds five feet wide, three rows in a bed, the outer being one foot from the edge, and allow twelve inches in the rows; set the plants at least six inches below the surface. 1/4 lb

ARTICHOKE

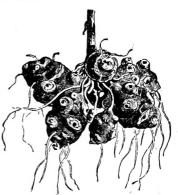

Culture—Deep rich sandy loam, with plenty of well rotted manure. Sow seed in April and May, and when large enough transplant into rows three to four feet apart and two feet

in the rows. They reach maturity the second year. Cover with litter when cold weather commences, first tieing up the leaves so that they will occupy less space, and in spring fork in a dressing of manure. It is an excellent vegetable and easily grown, thriving in any situation, providing the heads are cut off and used as they get ready.

BEET

Ready for table use in 40 to 60 days.

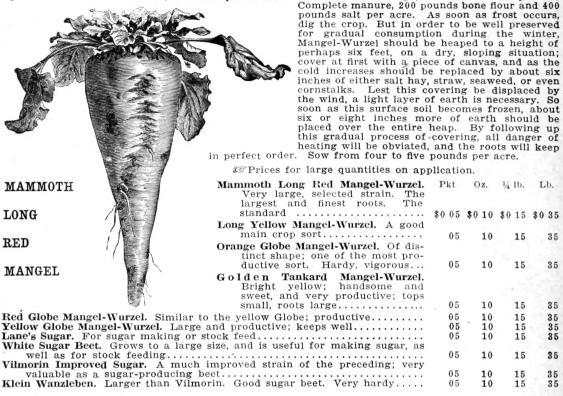

Culture—Sow as early in the spring as the ground can be worked, and every two weeks after for a succession up to the first week in July. For general crop sow about the middle of May. The soil should be light sandy loam, well enriched with stable manure and plowed and harrowed until very fine. Sow in drills one foot to fifteen inches apart, and when well up thin to from four to six inches. The young beets pulled out of the rows are excellent used as Spinach.

BEETS-MANGEL-WURZEL, SUGAR, ETC.

Culture—As all Mangels require a deep soil in order to grow well, plow and sub-soil at least a foot to eighteen inches, and apply plenty of rich stable manure. Sow in May or June, in rows eighteen inches to two feet apart, and thin to eight inches in rows. Young plants may be transplanted to fill up vacancies. Sow in addition, when the plants are three or four inches high, at the rate of 200 pounds.

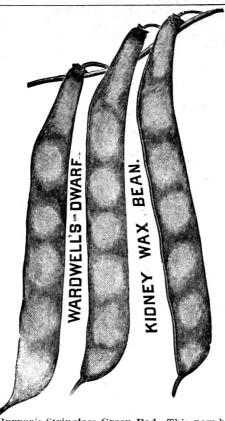

BEANS

As a farinaceous food for man, the bean is considered far superior to any other legume, and next in importance to wheat. The modern varieties leave little to be desired; the great care given to their improvement has resulted in many superior sorts, greatly extending the season of use, as well as varying the quality or flavor. The rearing of a really dwarf form of the Lima Bean is one of the greatest recent advances.

DWARF, OR SNAP BEAN

Green Podded—Ready for use in 30 to 40 days.

Culture—About the first of May select a warm, dry, sheltered spot; dig and manure slightly; make drills two inches deep and eighteen inches to two feet apart; drop the beans three inches apart in the drills, and cover not more than two inches deep. Hoe well in dry weather to keep down the weeds. Sow every two weeks for a succession.

POLE OR RUNNING LIMAS-Ready for use in 70 to 90 days.

Culture-Sow as the soil becomes warm and dry from the first part of May (for all except Limas) to the latter part of May, in hills four feet apart each way. Limas should not be planted until warm weather has fairly set in. One quart of Limas will plant about 100 hills, allowing four or five beans to a hill, and of the smaller sorts about 200 hills.

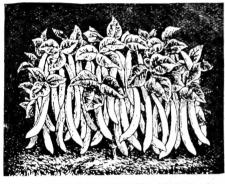

Poles eight to ten feet long should be firmly set in the center of the hills before putting in the seed.

BRUSSELS SPROUTS

Culture—Sow in May in the same manner as Cauliflower, and transplant in July, one foot apart in the rows, which should be one and one-half feet apart. In gardens, both large and small, Brussels Sprouts are, without exception, the very best winter vegetable that can be grown. The real sprout is not much larger than a marble, and as firm and hard almost as the stalk itself. These are the sort which cooks prefer. They strip off the outer covering, cook them whole, and serve them up artistically in that fashion. When cooked through and no more, such Sprouts melt in the mouth like the tenderest Cauliflower, and are equally as good.

CHERVIL

Culture—Cultivate and use the curled variety of Chervil like Parsley. Sow at any time in the spring, in shallow drills, one foot apart, in well prepared ground. The seed of the Tuberous Chervil should be sown in August or September, and treated like the Carrot.

Pkt. Oz. 4 lb. Lb.

CHICORY

Chicory is cultivated chiefly for its roots, which are dried and used as a substitute or flavoring ingredient for coffee. The leaves, when blanched, are also esteemed as a salad. Cultivate as recommended for carrots.

Pkt Oz. 4 lb. Lb.

CABBAGE

Ready for use in 75 to 120 days.

We carry the finest strains of American Long Island grown cabbage seed. Market gardeners can depend on plants from our seed heading.

Culture - Soil for Cabbage should be rich and heavy loam, with good drainage. On such a soil, with an abundance of stable or Thornburn's Complete Manure, excellent crops are sure to be grown. For early spring sow in fall; not too early, or the plants are liable to bolt in the spring instead of heading. In a month the plants will be fit to transplant to cold frames, where they are wintered, taking care, in planting, to set the young plants down to the first leaves. Transplant in spring as leaves. Transplant in spring as soon as the ground can be worked, setting the plants two feet apart one way and from twelve to fifteen inches the other, according to the variety. For late or winter crops the seed is sown in May, and the plants set out in July. In this case they are set in rows two by three feet, so as to work them with a horse and cultivator. To destroy the green worm that is so destructive to the leaves and heads of cabbage and cauli-flower an experienced grower says: "Take one ounce of saltpetre and dissolve it in twelve quarts of water, then take a short handled whisk broom, dip it in the solution and sprinkle the plants well. One application is sufficient unless the stuff is washed off by heavy rains.

The liquid being perfectly clear, never colors the cauliflower or cabbage head." To prevent the turnip flea from attacking the young plants, sift fine air-slaked lime or tobacco dust over them as

| Early Flat Dutch. A remarkably fine strain; a sure header, the head weighing from ten to twelve pounds; most valuable for market | 05 | 20 | 50 | 1 75 | |
| Henderson's Early Summer. A superior second-early sort; produces large and solid heads of fine quality | 05 | 20 | 50 | 1 75 | |
| Selected All Seasons. One of the finest for second-early or late, growing to a large size quickly and surely; the true sure header | 05 | 20 | 50 | 1 75 | |
| Henderson Succession. An excellent second-early or late sort on the style of | 0.5 | 20 | 50 | 1 75 | |
| All Seasons | 05 | 20 | 50 | | |
| Filder Kraut. Pointed head; fine for kraut | 05 | 20 | 50 | 1 50 | |
| Fottler Brunswick. Good, solid heads, either for second-early or late | 05 | 20 | 50 | 1 50 | |
| Stonemason Drumhead. A standard winter cabbage for main crop | 05 | 20 | 50 | 1 75 | |
| Premium Late Flat Dutch. Also a valuable main crop sort for market | 0.9 | 20 | 50 | 1 75 | |
| Large Luxemburg. Solid head, oval shape, outer leaves tinged red, stem remarkably short; very sweet and tender | 0.5 | 20 | 50 | 1 75 | |
| Drumhead Savoy. Very fine strain. | 0.5 | 20 | 50 | 1 75 | |
| Mam. Rock Bed. Very large, solid, red heads; the finest strain of Red Cabbage | 0.5 | 20 | 50 | 1 75 | |
| Red Dutch. For pickling; hard, oblong heads; dark purple | 0.5 | 20 | 50 | 1 75 | |
| Hollander. One of the hardiest in cultivation, quite a distinct variety; medium size, round, very solid, extra keeper, best of quality—our seed is from a very reliable Danish grower. | 05 | 20 | 60 | 2 00 | |
| Marblehead Mammoth Drumhead. The largest cabbage known, weighing in some instances over fifty pounds; under good cultivation acres have been grown where the heads would average thirty pounds each | 05 | 20 | 50 | 1 75 | |
| Genuine Sure-Head. Never fails to make a large, fine head with few outer leaves; fine grower; flat drumhead | 05 | 20 | 50 | 1 75 | |

CAULIFLOWER

Ready for use in 90 to 120 days.

EARLY SNOWBALL

Culture-This is the same as for cabbage, except that extra manure and plenty of water will pay upon this. If the soil be dry, water frequently, and if the plants could have a heavy mulch of hay or straw, it would keep the soil moist, and the plants would not suffer from drought. The early kinds should be strong enough to plant out not later than the middle of April; the late kinds may be planted out same time as for cabbage. To destroy the cauliflower maggot, it is recommended to take one ounce of sulphuret of potasium and dissolve it in one gallon of water. Heat the liquid to about 100 degrees, take a large spoon, or something that will hold the 100th part of a gallon, and pour the liquid against the stalk of the plant just above the ground.

COLLARDS

CORN SALAD, OR FETTICUS

Culture—Sow during August or early in September, in drills a quarter of an inch deep and six inches apart. If the weather is dry when the seed is sown, tread it in slightly to insure germination, Keep down weeds with hoe. Just before winter cover thinly with straw or leaves.

CRESS

Culture—Sow thickly in shallow drills every two or three weeks. It is used not only for salad, but for the breakfast table and for garnishing. Water Cress should be sown in damp soil, or if a stream of water can be utilized, it would be much finer. It will also thrive in damp hotbeds. Rightly managed its culture is very profitable. To obtain early salad, it is a good plan to sow with the Water Cress seed a strip four inches wide on the outer margin of a hotbed, inside the frame (where it is always cool). This will be found a satisfactory method of obtaining it early.

CELERY

Ready for use in 100 to 120 days.

Culture—Sow the seed in a light, rich, dry border as early as the ground can be worked, in drills eight or ten inches apart, and cover the seeds about a quarter of an inch deep, rolling or treading them in if the ground be dry. When fairly out of the seed leaf, they may be transplanted to another bed, or they may be thinned out to six or eight inches apart, and let grow until wanted to plant out in beds or trenches. The bed should be kept well weeded, and an occasional soaking with water in dry weather will do the plants good. Early in July at the north, a month or six weeks later in the

southern states, is the proper time to set the plants out in beds or trenches. Press the soil firmly against the roots. In the garden the better way is to set the plants in shallow trenches-we say shallow, for it is obviously a bad plan to remove all the good soil (as must be done in a deep trench) and put the plants in that which is poor. The plants may be set in a single row in a narrow trench, or the trench may be made into a bed wide enough to hold two, three or four rows, and in case the plants are in a compact form to be covered for the winter where they grow. This will save much labor where there is no root cellar for storage, as often happens to be the case. When grown in beds this way, the rows should be one foot apart, and the plants about eight inches apart in the rows. The bed should be made very rich with thoroughly decomposed manure. The plants will need to be earthed up two or three times, and in doing this care should be taken not to let the earth get into the heart of the plant. In field culture the plants are set on the surface in rows four feet apart when the celery is to be earthed up in the field for early use, and two feet apart when the plants are to be taken up and blanched in the cellar for winter The plants are set six inches apart in rows. not grown in beds, the best way to store is to dig trenches in a well drained spot in the open ground, one foot wide and of a depth a few inches less than the height of the celery. The plants are then lifted and set close together until the whole quantity is stored. The edges of the trench should be made sloping from the tops of the plants. When severe cold weather comes on, cover gradually with leaves, hay or straw and place boards on top. In such a trench the stalks will blanch perfectly, and may be taken out any time during the winter for use or sale as required.

The turnip rooted or "Knob" celery needs no earthing up, and may be planted in rows one foot apart.

WHITE PLUME

| | Pkt | Oz. | 1/4 lb. | Lb. |
|---|--------|--------|---------|--------|
| Improved White Plume. Naturally white or light foliage; requires but little banking up to blanch; very early and extensively grown for market | \$0 05 | \$0 20 | \$0 50 | \$1 75 |
| Golden Self Blanching. A grand solid variety, on the style of the White Plume, except that it is golden yellow where the Plume is white | 05 | 20 | 60 | 2 60 |
| Giant Pascal. An easily blanched and fine keeping large sort, of excellent flavor; superior for late use | 05 | 20 | 50 | 1 50 |
| Large Ribbed Kalamazoo. A good half dwarf white solid celery | 05 | 20 | 60 | 1 75 |
| Boston Market. Rather dwarf; has no particular merit | 0.5 | 20 | 60 | 1 50 |
| Crawford Half Dwarf. Of vigorous growth and excellent flavor | 0.5 | 20 | 60 | 1 50 |
| Sandringham Dwarf White. Small, white solid | 0.5 | 20 | 50 | 1 50 |
| Giant White Solid. Large, round, crisp and solid; the old well known variety | 0.5 | 20 | 50 | 1 50 |
| Celeriac or Turnip Rooted. Has edible roots which are used for soups and stews | 0.5 | . 20 | 35 | 1 25 |

| Golden Heart Dwarf. A very popular and distinct variety; in habit of growth it resembles the Half Dwarf white sorts, except that when blanched the heart, which is large and full, is of a waxy golden yellow | 05 | 20 | 50 | 1 75 |

FIELD CORN SWEET

PRIDE OF NISHNA

In cataloging this branch of our business, we wish to state to our customers and the trade in general the value and importance of procuring not only good varieties of seed corn, but that which is grown in the very heart of the Great Corn Belt, grown in a climate and a soil where it not only develops great vigor of stock, size of ears and richness of kernel, but where there is a climate like ours, which at the right season of the year ripens and preserves it for seed of the highest test.

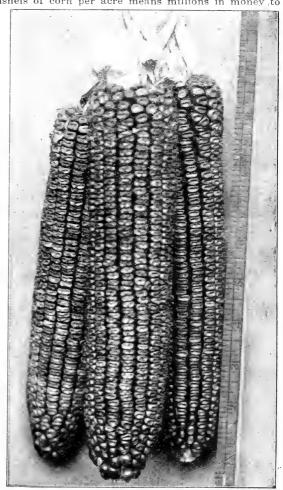

For a number of years we have given this branch of our business the strictest attention, and by selection year after year of our seed stocks we are able to offer our customers for the coming season varieties of seed corns of the purest strain and truest types that are possible to produce.

Many farmers realize the value of changing seed and securing the best and truest strains and reaping the reward of their wisdom in choice by the yield of their acres. Still there are those who wait for their neighbors to get the seed first, and put off buying good seed until the next year. This plan was all right before the flood when men lived hundreds of years, but all should realize that it's too slow for this advanced age. Get good seed this year and improve it still more next. The farmer is the basis of the real wealth of our country. An increase of from one to five bushels of corn per acre means millions in money to

the farmers of Iowa and surrounding states.

> At the rate of \$1.25 per bushel for seed corn it costs only about 25c per acre to plant your field with purest strains of good, vital seed.

We do not boast as some people do that to procure good seed of certain varieties and kinds you must of necessity get it through us, but we do pride ourselves in stating to you that the varieties we have described in this catalogue are not only of the purest strains, the highest developed types, but grown in the finest climate on earth for curing and ripening the corn for seed. What is true of the autumn season for curing field seed is also of still greater value in curing and ripening for seed the different varieties of sweet or sugar corn. The great amount of saccharine matter in this corn makes it often, in damp and foggy climates, hard to cure, even by kiln drying, and then it seldom ever tests over 75 per cent. to grow, whilst here in our rich autumn sunshine, where fogs are seldom or never seen at that season, this corn ripens and cures to perfection and will test as much as 95 per cent. nine times out of ten.

EARLY ROSE

Pk 1/2 bu. Bu.

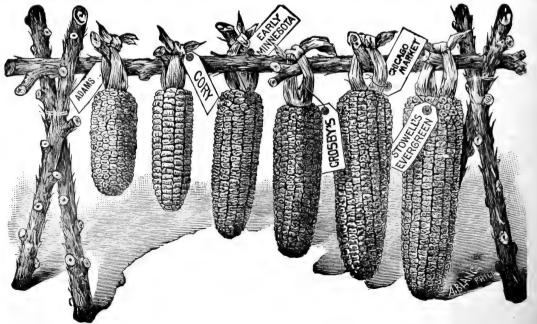

Pride of Nishna. A very fine, beautiful yellow dent corn; large ear; about 110 \$0 10 \$0 50 \$0 90 \$1 50 days. Really the best corn we have for Sioux City and south..... 90 1 50 Armstrong's Early Rose. Fine yielder, beautiful yellow dent.....

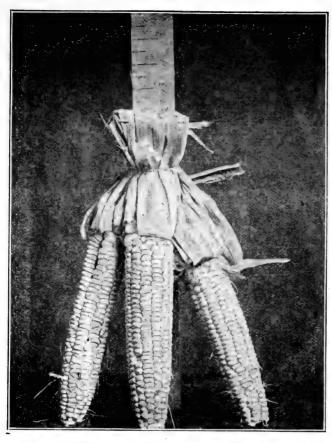

SWEET OR SUGAR CORN.

Culture—Plant in hills three feet apart each way, and five or six kernels in a hill. Hoe often and draw soil up to the stems; break off side shoots. Make the ground rich with well rotted manure. Sown in drills, a greater yield from a given surface will be obtained. The best fertilizer is Thornburn's Complete Manure. By sowing successive lots and properly selected varieties, the supply of sweet corn can be kept up until hard frosts kill the plants.

Market gardeners and private planters will do well to consider that our northern grown seed will give them earlier corn than will seed of the same varieties grown farther south. Our seed is thoroughly tested before it leaves our hands.

WHITE MEXICAN

WHITE MEXICAN

WHITE MEXICAN

Do you know the marvelous sweetness of the old Black Mexican? You like its taste, but dislike its color. Well, we have something finer in every way, superior in sweethings, a pure ivory white color, large as the Minnesota, earlier than the Cory. It was ready for table use this year in 56 days. Originated in Fort Dodge, Io. Was placed in our hands for trial and development. We know of nothing its equal for the market gardener. If you want the finest market gardener's corn known, plant White Mexican. We control the entire stock. You cannot get it from anyone but us or our dealers.

"I planted the White Mexican Sweet Corn you sent me. I have been planting sweet corn for 25 to 30 years. This White Mexican is superior to any extra early sweet corn I ever saw. Was ready to eat in 58 days from planting."

H. B. SMITH, Odebolt, Io.

H. B. SMITH, Odebolt, Io.

"I planted your White Mexican this season, at the same time I planted extra early sweet corn from an eastern seed house. I found the White Mexican earlier and superior in every way. It's the finest early rior in every way. corn I ever had."

DESING BROS., Marshalltown, Io.

DULY'S HYBRID (95 DAYS)

DULY'S HYBRID (95 DAYS)

We can confidently say that this is without doubt the finest and largest yielding Early Corn ever offered in the northwest. Kernels fine golden dent. Yielded with us 75 to 80 bushels per acre. Originated near Sioux City in the Missouri Valley. This may be planted in June and will be out of the way of frost by September 1. Its yield is sufficiently large to warrant planting for general crop. The man who plants this last of May to first of June will always have sound corn. This corn is nearly as early as the Pride of the North and will outyield this sort two to one. Largest and longest eared early corn known.

"I have been planting corn for thirty years. In that time I planted many varieties; for three years I have planted Duly's Hybrid, and have found it the best corn I have ever grown. It never gets caught by the frost—always sound and hard and a big yielder. It's the corn sure."

A. J. DAVISON.

FARMERS, DAIRYMEN, STOCK RAISERS—Try the Evergreen Sweet Fodder Corn

The necessity for green fodder is becoming more apparent each year to all dairymen and stock raisers, and the demand for it is increasing in proportion as the ability of our over-taxed lands to supply sufficient pasturage grows less. The best thing for the purpose is our

EVERGREEN SWEET FODDER CORN

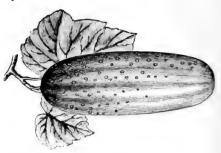

This variety is generally acknowledged by our best farmers, dairymen and stock growers, as being better and far superior to what is known as either the brand of ensilage corn, Red Cob Ensilage or Southern White Ensilage, from the fact that it grows to an immense size, making a large, juicy stock, that is so very sweet and nutritious that cattle will eat every part of the stock and leaves with a relish. clean to the butt.

Evergreen Sweet Fodder Corn also yields an enormous quantity of leaves, and the stocks are in saccharine matter—more so than any other variety we are acquainted with. rich For prices see above.

CUCUMBER

Ready for use in 40 to 60 days.

Culture—For very early, sow seed in hot bed on pieces of sod, or in small pots, and they can be readily transplanted with a gain of about six weeks before they can be sown in the open ground. Plant out in rich soil when danger of frost is over, or they may be protected by hand glasses, or even by paper held down at the corners with a handful of earth. For general crops, sow in the open ground as soon as the weather is settled and warm, and again every two weeks for a succession. For pickles, sow from the middle of June to the first week in July. Sod land, turned over in the fall, is the best for them. Plant in hills four feet apart, putting a shovelful of well rotted manure in each hill.

DANDELION

Culture—The Dandelion is a hardy perennial plant, and one of the most desirable early spring salads. Sow in early spring in drills half an inch deep and eighteen inches apart; thin out the plants to twelve inches. Keep clear of weeds during the summer, and the ensuing spring the leaves will be fit to cut. They are best, however, when blanched, which makes them tender and destroys to some extent their bitter taste without in any way impairing the quality which makes them desirable as greens. Per pkt 5c; oz. 20c; ¼ lb. 75c; per lb. \$2.00.

ENDIVE

Culture—Sow in June, July and August, cover lightly, when up thin out to eight inches apart and water well afterward, if dry. When the leaves are six or eight inches long, blanch by gathering in the hand and tying together near the top with yarn or bast. This must be done when quite dry, or they will rot. At the approach of winter take up carefully, with a ball of earth to each plant, and place close together in frame or cellar for use. They must be kept dry and have plenty of air, or they will rot.

Pkt Oz. 4 lb. Lb.

 Green Curled Winter. Standard sort for fall and winter crop.
 \$0.05 \$0.15 \$0.40 \$1.40

 Broad Leaved. A sweet variety, fall and winter.
 05 15 40 140

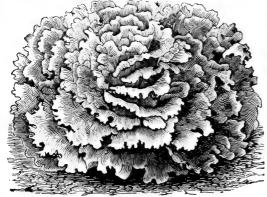

FENNEL, FLORENCE OR NAPLES

Culture—Sow in spring in rows sixteen to twenty inches apart. Thin out so as to have the seedlings five or six inches apart, and water as plentifully as possible. The plant is usually eaten boiled. In flavor it resembles celery, but with a sweet taste and a more delicate odor. Pkt 5c; oz. 15c; per ½ lb. 40c; per lb. \$1.50.

EGG PLANT

Culture—Sow in hot beds, very early in spring, and transplant when two inches high into a second bed or into small pots. If that is not done, thin to four inches apart. Do not plant out until the weather becomes perfectly settled and warm. Cool nights or wet weather will check them. Keep some back in frames for a second planting in case of weather changing unexpectedly. Keep plants watered for a few days if the sun is hot when put in. Set out plants three feet by two.

LETTUCE

Ready for use in 40 to 60 days.

Lettuce thrives best in rich, moist ground. For the principal early crop sow the seed in September in the open ground. Transplant when large enough into cold frames, and protect the plants during the winter in the same manner as early cabbage. Set the plants out early in April, or sow the seeds in hot beds in February or March, and transplant into a sheltering border with a southern exposure. For successive crops sowing may be made in the open ground as early as the spring opens and continuing until July. Always thin out well or the plants will not be strong. When wanted as a cut salad sow the seeds thickly in rows or broadcast.

| tender | 05 | 10 | 25 | 75 |
| Paris White Cos. Fine if sown very early; requires tying up to blanch | 05 | 10 | 25 | 75 |
| | | | | |

KALE OR BORECOLE

Culture—Cultivated and grown exactly like cabbage. Sow early in the spring in a hot bed, and when from one to two inches high transplant into a bed or border that has been highly manured and deeply dug. The plants should stand two feet apart, in rows three feet apart. The soil should be kept mellow and free from weeds. Cover with litter or leaves during the winter. Plants started grown this way should be fit to blanch the following spring. The seed may also be sown early, in the open border, and transplanted in rows (as directed above) as soon as out of the seed leaf; but they will need to be a year older than the hot bed plants before being fit to blanch. Sea Kale is not fit to eat till it has been blanched, either under large pots or by banking up with sand. The mid-ribs are the parts eaten. They are cooked like asparagus and usually served with drawn butter.

| | Pkt | Oz. | ¼ lb. | Lb. |
|---|--------|--------|--------|--------|
| Ex. Curled Dwarf German Greens. Very dwarf and spreading; best strain | \$0 05 | \$0 10 | \$0 25 | \$0 80 |
| Curled Tall Green Scotch. A taller growth of the above; late variety | 05 | 10 | 20 | 75 |

KOHLRABI

Culture—This is an excellent vegetable and should be grown in every garden. Sow in spring, in rows eighteen inches apart, afterwards thinning the plants to eight or ten inches. If the weather is suitable the thinnings may be planted, but it is considered difficult to transplant. Keep the weeds down and when the thickened stem above ground is two or three inches through they are fit to eat, and should be used at once; being tough when old. They are cooked the same as turnips, and, when well grown and used at the proper stage, are tender and palatable.

| Early White Vienna. | Handsome and delicate; white ball | \$0 05 | \$0 20 | \$0 60 | \$2 00 |
| Early Purple Vienna. | Very good sort | . 05 | 25 | 75 | 2 50 |

LEEK

Culture—Sow very early in the spring in drills six inches apart and one inch deep. Thin out to one inch. When about seven inches high transplant them in rows seven inches apart and as deep as possible; but do not cover the young center leaves. Water thoroughly, if dry when planted out. Draw earth up to them as they grow; rich soil is required. Take up and store in earth in a cool cellar before winter weather. The seed may also be sown in September, and the young plants transplanted in spring to where they are to remain.

MUSHROOM SPAWN

Culture-Mushrooms may be grown in cellars, under benches of green houses or in sheds whereever the temperature of fifty degrees can be kept up through the winter. The beds should be made from November to February, according to the time the Mushrooms are wanted, and it requires about two months for them to begin bearing. Secure fresh horse dung, free from straw and litter, and mix to an equal bulk of loam from an old pasture with it. Keep this under cover, taking care to turn it every day to prevent heating, until the pile is large enough to make a bed the required size. Three or four foot wide, eight inches deep and any length desired, are the proper proportions for a bed; but these may be varied. Prepare the mixture of loam and manure, making the bed in layers and pounding down each with the back of the spade. Leave this to heat through for a few days, and as soon as the heat subsides to ninety degrees make holes in the bed about a foot apart each way, into which put pieces of spawn two or three inches in diameter; fill up the holes with the compost, and at the expiration of a week or ten days the spawn will have thoroughly diffused itself through the bed. Spread a layer of fresh soil over the heap to the depth of two inches, and cover with three or four inches of hay, straw or litter. Examine the bed often to see that it does not get dry. Take special care, however, when water is given that it be at a temperature of about one hundred degrees.

MUSTARD

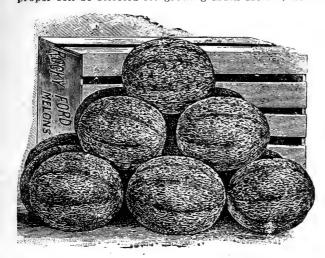

English Spawn

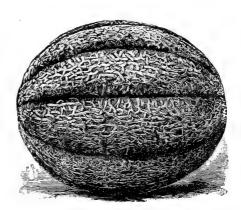

Culture—Sow thickly during early spring, in shallow drills, and press the earth well down. For fall salad, sow in September, or in frames or boxes during the winter.

MELON-MUSK

Culture—Select a light, sandy, rich soil, and after all danger of frost is over, and the ground has become warm and dry, plant in hills four to six feet apart each way, six to twelve seeds to the hill. When up and all danger of insects has passed, pull out all but three plants. Cultivate until the vines cover the ground and pinch the ends of the growing shoots to induce early fruiting. Ashes, lime or even dry road dust is excellent to sift over the young plants when the dew is on to prevent the attacks of insects. A few hills for early use may be had by sowing in hotbeds on pieces of sod or in pots. The seed may also be started out of doors under hand frame or glasses. It is quite important that proper soil be selected for growing Musk Melons, as on heavy soil the quality will be poor.

MARTYNIA

For Pickles

Culture-Sow in May in the open ground, three feet apart in each direction, where the plants are to remain; or the seed may be sown in a hot bed and the seedling afterward transplanted. Both varieties are productive and fine for pickles. Pick when small and tender, and preserve the same as Pkt Oz. ¼ lb. Lb. \$0 05 \$0 25 \$0 75 \$2 50 cucumbers.

Proboscidea

NASTURTIUM

Culture—Sow as soon as all danger of frost is past, in drills about an inch deep. The tall kinds require fences or poles on which to climb. The seeds are used for flavoring pickles or as a substitute for capers.

Pkt Oz. 1/4 lb. Lb.

OKRA OR GOMBO

Culture—Sow late in the spring, after the ground has become warm, in drills three feet apart, where the plants are to remain. Thin out from nine to twelve inches. They should be well mahured. They may also be raised in pots or a hot bed and transplanted.

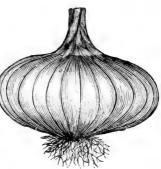

| fured. They may also be raised in pots of a not bed and transplanted. | | | | Lb. |

PEAS

Ready for the Table in 50 to 70 days.

Culture-A week may be gained in earliness by sowing a quantity in moist sand, placed in a box in the cellar, and planting outside when well sprouted. Light dry soil, not over rich, suits the pea. Sow as early as the ground can be worked, and again every ten days, for succession, up to the first of June, after which there is danger from mildew. Sow in single or double rows, from four to six feet apart, according to the different heights, about an inch apart in the rows (except such sorts as we note to sow thin) and four inches deep. Hoe often and keep the ground clean and fine. The tall sorts can be made to bear more freely by pinching-in. The dwarf varieties may be grown in beds like Bush Beans, with rows about the same distance apart. The holes which are sometimes found in peas are caused by the Pea Weevil, (Brushus pist). This insect is a native of this country, but, as usual with such pests, has spread rapidly and is now found nearly all over the world. The beetles lay their eggs on the young pods and the larvae, as soon as hatched, make their way through the pods into the nearest peas. They do not, as is sometimes supposed, destroy the germ, for peas will grow if they are infested, but the plant is likely to be more feeble, and for this reason will not produce as large a crop as if free from the weevil.

LITTLE GEM

Peas marked thus (*) are wrinkled.

PEAS-CONCLUDED

GRADUS

A new English variety of the wrinkled peas; it is very hardy, so much so that, unlike most of its type, it can be planted extremely early; the vine grows about 21/2 feet high, is vigorous and very productive; the pods are large and well filled with good sized peas, seven to nine usually in a The Gradus is the earliest wrinkled pea in cultivation and one of the most delicious in quality.

Pkt. Pt. Ot. 1/4 Bu. 1 Bu. *Gradus..5c 30c 50c \$4 00 \$12 00

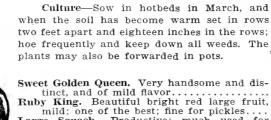

*NOTT'S EXCELSIOR

The finest Dwarf Wrinkled Extra Early variety

It is the best of recent introductions; vines are larger and more vigorous than the American Wonder, while the pods are fully one-third larger, containing six to eight fine large peas, packed so closely together in the pods that the peas are always more spuare than round. The pods are always well filled with peas, which in sweetness and quality have no equal, being superior to any other wrinkled sort.

The best Early Wrinkled Pea sold.

PEPPER

Sweet Golden Queen. Very handsome and distinct, and of mild flavor..... Ruby King. Beautiful bright red large fruit, mild; one of the best; fine for pickles . . . Large Squash. Productive; much used for pickles

Long Red Cayenne. Bright red, very productive Large Bell (or Bull Nose). Large and mild;

colored; fine flavor.... Red Cherry. Cherry shaped; for pickles, for which they are largely used.....

Red Cluster. A new type of Chili, with upright bright red fruits... Sweet Mountain. Large, regular and of mild flavor; one of the best for pickling Celestial. A Chinese pepper; at first fruit is yellow, and when fully matured becomes a deep scarlet.....

LONG RED CAYENNE.

SORREL

Culture-Sow in spring, in drills eighteen inches apart, in a rich soil, and keep the flower stems cut off as they appear. It remains in the ground year after year and only needs to be taken up and divided once in four or five years. To be cut and cooked precisely like spinach; or it is excellent cooked with it, one-third Sorrel to two-thirds Spinach. Very nice to be eaten after it has become Inasmuch as the hot sun tends to increase its acidity, a northernly exposure is preferable.

PUMPKIN

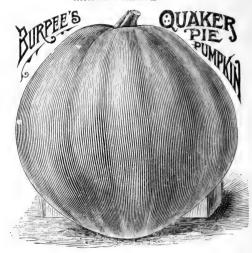

Culture—May be planted middle of spring, among corn or in the field or garden, in hills 8 or 10 feet apart each way, 4 seeds in a hill. In other respects are cultivated in the same manner as melons and cucumbers. Avoid planting near other vines.

LARGE CHEESE

| | Pkt | Oz. | 1/4 lb. | Lb. |
|---|--------|--------|---------|--------|
| Large Cheese. Flat; one of the best varieties for family use; good keeper | \$0 05 | \$0 10 | \$0 15 | \$0 40 |

RADISH

Ready for use in from 18 to 25 days.

Culture—Sow as soon as the ground is dry in the spring, in light, rich soil, in rows eight to ten inches apart, every week or ten days for a succession, up to the middle of June, after which they are but little used, unless a cool northern spot can be had where the ground is shaded during part of the day. Sow also in early fall for late crops and winter use.

#Those marked thus (*) are best suited for market gardeners.

RHUBARB

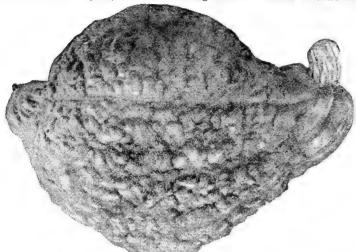

Culture—Sow seed in a cold frame, in a fine, rich, sandy loam, about the first of March, in drills four inches apart. Keep the frame covered during nights and cold days, so that the soil will not freeze, and in six to eight weeks the plants will be large enough to set in the open ground. Transplant to a rich soil, and set in rows twelve inches apart and twelve inches in the rows. The following spring transplant again to four or five feet apart each way, and the next spring the stalks will be large enough to pull. When roots are set out plant them four or five feet apart each way, and keep the weeds down. If roots are used a crop may be had after one season, which is much better than sowing seed when only a few plants for family use are needed. In the fall the bed should have a thick dressing of coarse manure, to be spaded under in spring.

SALSIFY OR VEGETABLE OYSTER

Culture—Sow as early as the ground can be worked in the spring, in drills twelve inches apart, one inch deep, and thin out to six inches in the row. Keep them free from weeds. Cultivate the same as for carrots and parsnips. A part of the crop may be left in the ground till spring, when it will be found fresh and plump. The roots are cut into pieces half an inch long, boiled till tender, and then served with drawn butter, in which way it is a delicious vegetable. They are also mashed and baked like parsnips, and have a sweet, agreeable flavor. Mashed and fried the flavor is much like that of the oyster.

| Mammoth Sandwich Island. Large and superior | 0.5 | 15 | 40 | 1 50 |

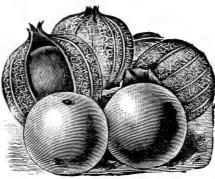

TOMATO

Ripening in from 85 to 120 days.

Culture—Sow in hot bed in early spring or the seed may be sown in shallow boxes and placed in a window when one does not wish to have the trouble of making a hot bed. Transplant to the open ground when all danger of frost is past, setting the plants three or four feet apart each way. Some

support should always be provided for the vines, to keep the fruit from touching the ground. Fruit may be had several weeks earlier by sowing the seed quite early, and transplanting to small pots; when these are filled with roots shift to a larger size, and transplant to open ground when the weather is warm and settled, shading from the sun for a day or so. As the roots are not disturbed in taking plants from the pots, the plants suffer no check, but grow right on.

GROUND CHERRIES

| | Pkt | Oz. | ¼ lb. | Lb. |
|---|--------|------------|--------|---------|
| Matchless. Extra large, smooth and handsome; bright red, very solid | \$0 05 | \$0 20 | \$0 50 | \$1 75 |

TURNIP

Mature in 60 to 90 days.

Culture-For early turnips sow as soon as ground opens in the spring. The Milan and Munich should be sown from any time in July to the first of August, but the other kinds for winter use may be sown from middle of July to end of August. Turnips are generally sown broadcast, but much larger crops are obtained (particularly of the Rutabagas) by cultivating in drills eighteen inches apart and thinning to six inches in the drill. Sow one pound

AROMATIC, MEDICINAL AND POT HERBS GENERAL CULTURE DIRECTIONS

Most of the varieties thrive best on rich sandy soil, which should be carefully prepared and well cultivated, as the young plants are for the most part delicate and easily choked out by weeds. Sow as early as the ground can be made ready, in drills sixteen to eighteen inches apart, taking pains that the soil is fine and pressed firmly over the seed, or they may be planted as a second crop, the seeds sown in beds in April and the plants set out in June. Most of them should be cut when in bloom, wilted in the sun and thoroughly dried in the shade.

Anise. A well known annual herb whose seeds, which have an agreeable aromatic odor and taste, are used for dyspepsia and colic and as a corrective of griping and unpleasant medicines. early and thin to three inches apart in the row......oz. 10c; ¼ lb. 30c; lb. \$100

Balm. A perennial herb, easily propagated by division of the root or from seed. The leaves have a fragrant odor, similar to lemons, and are used for making balm tea for use in fevers and a pleasant beverage called balm wine. Plant early and thin to ten inches apart.

Caraway. Cultivated for its seed, which is used in confectionery, cakes, etc. The leaves are sometimes used in soups. If sown early in August the plants will give a fair crop of seed the next season, but when sown in the spring will not seed until the next year. Plant in drills two or three feet apart and thin to six inches apart in the row.......oz. 10c; 1/4 lb. 25c; lb. 75c

Cat Mint, or Catnip. A hardy perennial, well known as a valuable nervine for infants. The plants should be pulled up by the roots when in full flower and dried in the shade. The seed may be sown either in the fall or early spring, in drills twenty inches apart. . oz. 30c; 1/4 lb. \$1 00; lb. \$3 00

AROMATIC, MEDICINAL AND POT HERBS-CONCLUDED

Dill. An annual, cultivated for its seed, which has an aromatic odor and a warm, pungent taste. It is good for flatulence and colic in infants and is sometimes added to pickled cucumbers to heighten the flavor. Sow early in spring and keep clear of weeds.......oz. 10c; 1/4 lb. 20c; lb. 60c

Marjoram, Sweet. A perennial plant, but not hardy enough to endure the winter of the North. The young tender tops are used green for flavoring, or they may be dried for winter use. Sow in drills as early as possible, and thin out the plants to ten inches apart.....oz. 15c; ¼ lb. 40c; lb. \$1 25

Thyme. This herb is perennial and is both a medicinal and culinary plant. The young leaves and tops are used for soups, dressing and sauce; a tea is made from the leaves, which is a great remedy in nervous headache. Sow as early as the ground will permit...oz. 20c; ¼ lb. 60c; lb. \$200

SWEET PEAS

Our Sweet Peas are unsurpassed for purity of Strain; nothing better in the U.S. They have given wonderful satisfaction the past year. If you buy ours you buy the best.

The following varieties are selected with a view to please the most critical, and we think are the CREAM OF THE LIST of Sweet Peas:

LIGHT SHADES OF PINK.

Duchess of York. Standard and wings large and fine form. White overlaid with a lacing of exceedingly delicate pale pink,

Eliza Eckford. Large flower of rosy pink over white, giving an exceedingly delicate and beautiful effect.

Katharine Tracy. The color is soft but brilliant pink, of the same shade in wings.

Prima Donna. The stems bear three or four very large, perfect flowers, of a brilliant yet soft shade of pink.

Venus. Standard large, of fine form and substance; a brilliant but delicate and soft shade of warm rose-pink and buff.

DARKER SHADES OF PINK.

Apple Blossom. Standard rose-pink, lighter at the edges; wings lighter than standard.

Her Majesty. The flowers are very large, a delicate rose-pink color.

Lady Penzance. A large and striking flower of a peculiar and beautiful shade of rose-pink, with a slight tinge of orange.

Peach Blossom. A very large flower, having a warm yellowish-pink standard and wings of a lighter, softer shade.

Royal Rose. One of the largest and finest formed flowers yet produced. Standard; a deep rose pink.

LAVENDER AND LIGHT BLUE.

Countess of Radnor. Self colored in a very distinct and beautiful shade of lavender.

Dorothy Tennant. Flowers warm violet or mauve; very large and finely formed.

Lottie Eckford. Standard; a peculiar and delicate shade of magenta blue.

Maid of Honor. Medium sized flower, nearly white, having a distinct edging of blue.

CLARET AND MAROON.

Duke of Clarence. A fine flower, with large standard and wings of uniform shade of dark claret.

Monarch. Standard large, fine form, violet maroon; wings very large and expanded.

Shahzada. This has a very rich, dark maroon standard and deep violet wings; one of the finest dark sorts.

SWEET PEAS—CONCLUDED

WHITE.

- Blanche Burpee. A splendid pure white variety. While not so profuse a bloomer or as hardy a plant as the Emily Henderson, the individual flowers are so fine as to make it a most desirable sort.
- Emily Henderson. A bold, well formed, clear white flower. Wings broad and well expanded. An early and wonderfully free and persistent bloomer.
- The Bride. The flowers are practically the same as the Blanche Burpee, but the stems are more slender.

STRIPED OR VARIEGATED.

- America. White, nearly covered with splashes, stripes and dots of exceedingly bright carmine; the most brilliant of the red striped sorts.
- Aurora. The standard and wings are striped and flaked with delicate orange-salmon, pink over white
- Gray Friar. Very large, finely shaped flowers of delicate heliotrope color, peculiarly tinged, marbled and dotted with darker shade.
- **Princess of Wales.** Standard broad, flat, striped purple on nearly white ground; wings very large and lighter than standard,

CUPID SWEET PEAS.

- Alice Eckford Cupid. This is a distinct Cupid or dwarf variety; the flowers have a peculiarly delicate beauty.
- Pink Cupid or Dwarf Blanche Ferry. This sort originated as a direct sport from the unrivaled Blanche Ferry and has inherited all the good qualities which make that sort so deservedly popular. The seeds are dark, and of much stronger vitality than those of the White Cupid, so that every one can succeed with it.
- **Primrose Cupid.** Very similar in size and form of plant and flower to the original White Cupid.
- White Cupid. The flowers of this variety are large, clear, white and of fine form.
- Firefly Cupid. Very bright, and intense crimson scarlet.
- Cupid Mixed. This mixture is composed of choice shades of white, yellow and reds, from light rose to deep scarlet and maroon.

SHADES OF RED.

- Blanche Ferry. Standard medium size, but of fine form and bright pink color; wings large, rounded and nearly white.
- Brilliant. Flower of good size and substance, color very brilliant rich red.
- Firefly. Very bright, and intense crimson scarlet; of good size and form.
- Salopian. One of the most brilliant and most richly colored sorts yet introduced.

BLUE AND PURPLE.

- Countess of Cadogan. A variety having very long stems, each bearing three or four flowers.
- Captain of the Blues. Standard large, broad, bright purple blue; wings expanded, lighter and brighter blue than standard.
- Navy Blue. A true blue, quite distinct.

LIGHT YELLOW.

- **Primrose.** Standard medium size, rather long, yellowish white in front, and pronounced primrose-yellow on the back.
- Stella Morse. The large flowers of this variety are of the finest form and a peculiar warm salmon-pink.
- Coquette. Large, finely formed flower. Standard warm primrose, with a shade of purple.

MIXTURES OF SWEET PEAS.

- Fine Mixed. One of the most satisfactory ways of growing Sweet Peas is in a mixed row. Many new combinations are obtained by cross-fertilization, and if good varieties are planted the result is sure to be satisfactory. Our Choice Mixture has no superior; it is not composed of refuse stocks, but contains the finest known American kinds.
- Fancy Mixture. Made of equal parts of the 40 named varieties as described above. This is a mixture that will give satisfaction to the most critical Sweet Pea lover. Will please the most fastidious.
- Eckford's Hybrids, Mixed. This is made up of the best of Eckford's large flowering sorts, carefully proportioned. As only Eckford's varieties are used in this mixture, some of our very best sorts are necessarily excluded; but it will give large, finely formed flowers in a great variety of beautiful colors.

FLOWER SEED

There is nothing that adds to the charm of a farm home like plenty of bright flowers. Not the greenhouse kind, but the hardy and lovely old favorites that have come down to us from the time of our grandmothers. Some of the newer flowers are all right, but for our part we prefer the pansies and pinks, sweet peas and poppies, sturtions and hollyhocks, and all the homelike flowers that we never tire of.

Culture—Most flower seeds should be planted shallow, say three times the diameter of the seed, and kept covered with an old cloth or carpet till sprouted to prevent drying out. Plant in rows for easy tending and keep the weeds pulled out, but be sure first that they are weeds.

Unless otherwise specified, the flowers are in mixed colors, as most people prefer them that way. On some we offer separate colors, but in such cases the colors are given.

- Alyssum. This is of easiest culture, and its white, fragrant flowers are produced in abundance all summer. Grows about a foot high and makes a mass of fine leaves and little white flowers.. 5c Antirrhum or Snapdragon. Beautiful spikes of gay colored flowers, produced abundantly the first

FLOWER SEEDS—CONTINUED

ASTERS—They are easy of culture and will grow anywhere. Plant the seeds outdoors or in a hotbed. Easy to transplant. Bloom in August and September when other flowers are scarce. Sometimes called fall roses.

| times called fall roses. |
|---|
| Choice Mixed Asters. All colors and all sizes. A mixture of many varieties, from the Dwarf German |
| to the immense Comet |
| Finest Mixed. Very choicest florist sorts. Can't be beat at any price. A great range of colors10c |
| Tall Mixed. All colors. Mostly the Giant branching 5c |
| Dwarf Mixed. All colors. Mostly the German quilled |
| White. Both tall and dwarf, but all pure white |
| SPECIAL OFFER—One packet each of the above five Asters for 20c, postpaid. |
| Balsams or Touch-Me-Not. This is one of the most satisfactory ones on the list. They bloom early and late, from June till frost. Always cheerful and bright and will grow and bloom anywhere5c |
| Extra Double. Includes the Invincible and Cammellia |
| Calliopsis or Coreopsis. Very handsome, showy plants, with hundreds of gorgeous brown and yellow blooms for the greater part of the summer. Easy culture, requires no care. Just plant the seed where you want it and it blooms in spite of anything, and in short time after sowing 5c |
| Candytuft. Fine for bedding. Grows about a foot high. Mostly white 5c |
| Canna. A large leaved, lily-like plant, with handsome yellow and red blooms. Generally grown from roots, but can be easily grown from seed. Soak the seed before planting, and cut a hole in the end |
| Carnation, Dwarf Marguerite. Blooms in four months from planting the seed and are equal to the ones grown in greenhouses. Try a bed of them |
| Castor Oil Bean. Fine for planting singly for decorative effect. Said to keep moles out of the garden |

PHLOX DRUMMONDI

ORNAMENTAL GOURDS

CYPRESS VINE

| Gourds. Fine for climbers. Useful as well as ornamental. Fancy Mixed, 5c. Nest Egg, 5c. Dipper, 5c. Sugar Trough |
|--|
| Hollyhock, A favorite with everyone. Tall and stately and always handsome. Finest Single, 5c. |
| Finest Double |
| Larkspur. Blue, red and white in tall spikes. Easy to grow |
| Marigold. Another old-fashioned flower |
| Mignonette. Very sweet. Fills the whole garden with fragrance |
| Moon Flower. A quick and rank growing climber. Large white flowers several inches across. Open |
| in the evening |
| Morning Glory. A common but popular climbing vine. Will grow anywhere. Common Mixed, the kind you have always known, many colors |
| Imperial Japanese. Finest mixed. This is imported seed and very fine. Plant and tend like common |
| ones |

FLOWER SEEDS—CONCLUDED

Nasturtiums. These are about as satisfactory flowers as you can plant. They will grow and bloom anywhere and, in fact, do better in hard, poor soil than in rich dirt. They come into bloom early and stay till frost kills them. Colors are all shades of red and yellow. The climbing sorts are fine to train up to a window. Dwarf or Tom Thumb—Grow about a foot high. A mass of blooms all summer; all colors, 5c. Tall or Climbing—The popular Lobbianum strain....Oz, 15c, Pkt. 5c

Pansies. Everyone is fond of Pansies, and everyone, rich or poor, should have a bed of them. They are easily grown and a constant delight. Plant early in the spring either outdoors or in the hotbed. Will do well almost anywhere, but do best in a cool place, a little shaded. We have the very finest imported seed and for size and brilliant coloring you cannot beat it anywhere. Packets contain about 150 seeds each. Prize Mixed—The German Imperial strain. This seed is from Schmidt, the great German grower, and you cannot beat it at any price. Flowers are of the largest size and of all imaginable colors. Most seedmen ask 25c for this grade, 10c. Choice English Mixed—A fine mixture. All colors, 5c. Separate Colors—White, blue, black and yellow, each, 5c.

SPECIAL OFFER—One packet each of the six Pansies listed above (regular price 35c) for 25c, post-paid. Will make a fine bed.

Wild Flower Garden Mixture. A mixture of the common annuals that are easy to grow and will do well anwyhere. Contains over 100 varieties. Sow all together and make a mixed garden of it. Nice for children, who always want a great variety in a small space. Large sized packets...10c

Portulacca or Rose Moss. Fine for rock piles and other places where it is hard to get anything to grow well. This is kin to pursley and will grow anywhere. Finest Single—All colors, 5c. Finest Double—A very fine mixture, producing nearly all double blooms............10c

(See pages 25 and 26 for Sweet Peas.)

Verbena. Finest Mammoth mixed. All colors, 10c. Choice Mixed—All colors...... 5c

COSMOS

ALFALFA OR LUCERNE.

FIELD SEEDS

CANE OR SORGHUM

BROMUS INERMIS

Nothing is more important to the farmer than that the grass seed he sows should be pure and clean. The seed should also be plump, heavy, and well ripened so as to insure a good stand. First class, thoroughly cleaned seed, while considerably more costly in the first place, is really much cheaper in the end than the light, chaffy grades so generally sold at much lower prices—even should the latter be free from weeds. Heavy, plump seed, germinating better, will produce a much greater number of strong plants. We handle but one grade—that is the very BEST which can be obtained from any source,

APPrices on Grass Seed fluctuate. Write for prices on large quantities.

Orchard Grass (Dactylis glomerata). This is one of the most desirable pasture grasses for stock and also for producing large crops of hay. It succeeds well in quite shady places, hence the name of Orchard Grass. Choicest re-cleaned seed, 14 pounds to the bushel, 3 bushels to the acre.

Timothy (Phleum pratense). Of the easiest cultivation and with us is usually sown in connection with winter grain in the fall, to which a seeding of clover is added early in the spring. 45 pounds to the bushel, from ½ to 1 bushel to the acre.

Fancy Kentucky Blue (Poa pratensis). This is pre-eminently a pasture grass, forming a close, fine sward. It thrives best in dry, well drained or limestone soils. 14 pounds to the bushel, 21/2. bushels to the acre.

English Rye Grass (Lolium perenne). This makes a quick growth very early in spring and is adapted for cool, moist locations; recommended for fall seeding on Bermuda-grass lawns in the South. giving them a bright green appearance all winter. 24 pounds to the bushel, 3 bushels to the acre.

Italian Rye (Lolium Italicum). This is distinct from the preceding, being of much larger and stronger growth, with large, broad, glossy-green blades. It succeeds best in moist, fertile soils. About 20 pounds to the bushel, 3 bushels to the acre.

Red Top, or Herd Grass (Agrostis vulgaris). It is a most valuable addition to sow with timothy and clover to form a close sward for pasturage. About 32 pounds to the bushel, 1 bushel to the acre; for lawns, 3 bushels to the acre.

Hard Fescue (Festuca duriuscula). An excellent pasturage or lawn grass, succeeding well in dry or shady locations. About 12 pounds to the bushel, 2½ bushels to the acre.

Sheep's Fescue (Festuca ovina). Slender, blades growing in close, compact clumps and from six to ten inches in height. About 12 pounds to the bushel, 2½ bushels to the acre.

Meadow Fescue (Festuca pratensis). An excellent pasture grass, the tender blades being relished by cattle. About 22 pounds to the bushel, 2 bushels to the acre.

Cane or Sorghum (Early Orange). Farmers are getting to realize the value of cane more every year. It can be grown on any ground and sown any time from April to July. It is better drilled than sowed. We use a one-horse wheat drill and put about two bushels to the acre between the rows of early peas, beans and sweet corn at the last cultivation. Also on the ground where we dig early potatoes. Cut it in September with a mower, binder or corn binder. Makes elegant feed for any kind of stock. Early Orange is the best sort, as it matures quickly and stands up We have a fine supply of seed, bright and sound, and sure to grow.

Kaffir Corn. Extensively grown in the west. Will grow where it is so dry nothing else will grow. In the corn belt it does well everywhere. The seed makes fine chicken feed, and yields well.

Speltz or Emmer. This new grain is rapidly becoming a staple crop in all parts of the west, and is becoming more popular every year. It grows somewhat like barley, but taller and ranker, and outyields any other small grain. The past year it made about twice the yield that oats did, did not rust or fall down. It is equal in feeding value to oats, and all kinds of stock take to it readily. Sow it very early like oats, and about the same amount to the acre.

FIELD SEEDS—CONTINUED

Sunflower (Mammoth Russian). Valuable to grow for chicken feed. Each plant makes a single big head, often a foot across. Plant and tend like corn and they will yield about the same.

Bromus Inermis or Awnless Brome Grass. This new hay and pasture grass was introduced and distributed by the U. S. experiment stations as something to take the place of clover and timothy in regions where they would not grow well, owing to dry soil or cold winters. It has succeeded beyond their hopes and is now a standard grass, not only in the dry, cold climate of the Northwest, but in the dry, hot Southwest, and even in the country where clover and timothy are a success. It will grow anywhere that they will, and lots of places where they fail utterly. No winter is cold enough and no summer dry and hot enough to kill it out, and you can realize what that means. It makes hay equal to timothy and of much the same quality and appearance. For pasture it comes earlier and stays later than any other grass we know of. The following report from the state experiment station at Brookings, S. D., gives such an accurate idea of it and such good directions for culture, that we have reproduced it entire: "We have been raising brome grass (Bromus inermis) at this station for about twelve years. During the earlier years we used it exclusively for meadow and seed, but for the last three years we have given it a very thorough trial as a pasture grass, and we are fully convinced that it is much the best grass yet tried here

for that purpose. It starts early in the spring, makes a very tough sod, is not easily killed out, either by close feeding or tramping; occupies the ground so fully as to drive out all weeds and inferior grasses, remains green later in the fall than any other grass and is greedily eaten by all kinds of stock."

RED MEDIUM

FANCY KENTUCKY BLUE

TIMOTHY

KAFFIR CORN

Johnson Grass (Sorghum halapense). Popular in the South and West, being of quick growth, the stout stalks reaching a height of six or eight feet before flowering; should be cut for hay before the flower spikes open. When once established, it is quite difficult to eradicate. 25 pounds to the bushel, about 1 bushel to the acre.

Alfalfa, or Lucerne (Medicago sativa). It strongly resembles clover in habit of growth and feeding value, but withstands drought much better. It is a perennial plant on well-drained soils, so that when once established it will continue to produce large crops for twenty years when properly cared for, and on some of the rich western prairies yields four to five large cuttings in a single season. It must be cut every time it comes into bloom, and not allowed to produce seed if permanency is desired. The plant is quite hardy, but will not succeed on low, wet soils. Sow from 20 to 35 pounds per acre.

Red Medium.. This is the common Red Clover so largely grown. We shall be pleased to quote prices at any time.

Alsike (Trifolium hybridum). This we consider the very best Clover to plant in mixture with other grasses, either for pasturage or for hay. The plant is perennial and very hardy, thriving equally well on wet or dry soils. The stems are more slender and much taller than those of the Red Medium Clover, and thus much better adapted for growing with Timothy to produce a high grade of mixed hay. Sow at rate of 10 to 20 pounds to the acre.

Mammoth. This grows much taller than Red Medium, with larger, leafier stalks, and large, slightly pointed leaflets. Prices quoted on application.

White Dutch Clover (Trifolium repens). This thrives in almost every soil and climate, succeeding equally well on heavy, moist land and thin, dry hillsides. It is of low-creeping growth and most valuable, both in pasture mixtures and for green, velvety lawns.

The prices of Grass and Clover Seeds fluctuate from time to time, according to the market.

ATWe shall be pleased to quote prices by mail.

FIELD SEEDS—CONCLUDED

MILLET

We are headquarters for Millets of all kinds and grades. We carry the largest stock in the Northwest.

Our facilities for recleaning are unsurpassed.

GERMAN MILLET-SOUTHERN GROWN

Pure German Millet develops the highest degree of perfection on or about the state of Tennessee. The truest and best strain of seed in this country is therefore produced in the southern states. This Southern Grown Seed, when planted here in the north, produces a much taller stalk, finer and far heavier growth of foliage than can be raised from our northern grown seed.

It is the judgment of those who have tried the seed from both sections, side by side, that the planter had far better pay \$2 per bushel for pure southern grown German Millet seed than to plant the other as a gift. It is, among agriculturalists, an established fact that the seed of any plant, taken from the South and planted in the North, produces a far greater quantity of foliage than can possibly be grown from seed of that same species raised in the north. It is also true that this same pure southern grown German Millet seed will not continue in its purity when grown for seed in the North, but hybridizing with the Fox Tail so common in the land, will in one or two seasons so degenerate that it is of but little better quality, if any, than common Millet. In order to always have the best results obtainable from German Millet it is therefore essential to the planter that he plant each season fresh, new seed grown in the South.

RED-SEEDED GERMAN

(Siberian)

If you want Millet for home use, either for forage or to feed the seed, there is no Millet equal to the Red-Seeded German. It is a species of the German Millet brought a few years ago into the Northwest under the name of Siberian. It not only possesses all the good qualities of the ordinary White Seeded German variety of Millet, but is in almost every particular its superior. In the height of growth it is about the same and heads out exactly the same head that the other does, but owing to the dense growth of leaves on the stalk, outyields the White Seeded variety in tons of better quality hay to the acre.

Cattle and Horses fed on it thrive and grow fat, and are never troubled with the kidney affection so often caused by feeding other sorts of Millet hay. Farmers and stockmen who have fed the seed of this Red Seeded variety of German Millet to their horses, cattle, hogs and fowls for several years claim positively that it is almost the equal to corn in its fattening qualities.

Hogs—Some time ago there was shipped to the St. Paul stock yards a car of hogs from North Dakota that were raised, fed and fattened on seed of this Red Seeded variety of German Millet, and had never been fed any other grain. This load of hogs was pronounced the finest that had ever reached that market, and took the top price.

WE ARE ALWAYS IN THE MARKET FOR MILLET, CLOVER, TIMOTHY, ETC., ETC.

If you have any to offer, please mail us a good sized sample and we will make you a price

DWARF ESSEX RAPE-Imported by Us Direct from Essex County, England. The Most Famous and Popular Forage Crop of America.

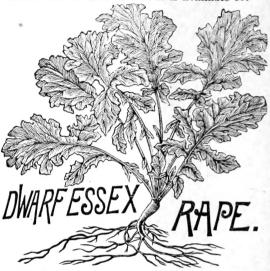

This extraordinary plant produces broad, succulent leaves on a central stock. It is on these leaves that the hog, sheep, or steer thrives and grows. There is no crop so easily and cheaply produced. The most profitable use of this forage plant is to sow it with oats. The oats act as a nurse crop, the most profitable use of this lorage plant is to sow it with oats. The bars at as a furse crop, keeping the rape dwarfed so that at cutting time by setting the binder a trifle high it makes no trouble. After the oats are cut then it is that the rapid and abundant growth of the rape takes place. From the cutting of oats until winter sets in, a palatable and nourishing food is supplied, and its abundance is remarkable. Sheep are made ready for market quickly, while hogs will thrive upon it remarkably well. The advantage of sowing it with oats rather than in corn is that it is available for pasture much sooner. Nothing excels rape for an early

forage for pigs. Unused lots and out of the way places on the farm can be made to pay well by sowing in rape. "Every farmer who has pigs, sheep and young stock should plan to grow a patch of rape each year."

One acre of well grown rape will furnish pasture for ten or twenty head of sheep for two months, and in that time it will fatten them in good form for the Dwarf Essex Rape thrives best on good soil, rich in vegetable matter. Slough lands are excellent.

rich in vegetable matter. Slough lands are excellent. This plant may be grown successfully in the following ways, viz: 1. In the early spring to provide pasture for sheep and swine. 2. In June or July on well prepared land to provide pasture for sheep. 3. Along with grain, using 2 pounds of seed per acre, to provide pasture for sheep after harvest. 4. Along with peas, oats, clover seed, to provide pasture for sheep and to get a "catch" of clover. 5. Along with corn, drilled in broadcast, to provide pasture for sheep. 6. In corn, sowing the seed with the last cultivation given to corn sowing the seed with the last cultivation given to corn. Along with rye, sown in August, in sheep pasture. When rape is sown broadcast, 5 pounds of seed per acrewill suffice. When sown in rows, say 30 inches apart, will suffice. will suffice. When sown in rows, say ou menes apart, and cultivated, from 1 to 2 pounds will be enough. It is now being grown in the northern and middle states from the Atlantic to the Pacific. Send to the U.S. Department of Agriculture for Free Bulletin No. 164 on "Rape as a Forage Crop."

Rape is the Cheapest and Best Forage Crop in the

The Most Conveniently Grown. The Greatest Amount of Food.

LAWN GRASS EMERALD GREEN GRASS MIXTURE

For Parks, Golf, Croquet and Tennis Grounds, Cricket and Athletic Fields
Our Lawn Grass Mixture which we offer should not be compared with the cheaper preparations advertised. Our prescription is of the best chosen varieties as respects color, texture and permanency,

and will be found clear of weed seeds. Anyone who purchases cheap, badly mixed lawn grass seed will soon realize that it was a poor investment, as the error will stand out for years in glaring ugliness. In the first place, see that your ground is thoroughly 60 pounds seed to the acre

drained and well prepared, sowing at least three bushels of seed to the acre.

Perhaps the best description of soil for lawn is the stiff loam or clayey soils which predominate in so many districts. This ought not to be by any means too rich. This ought not to be by any means too rich, as a rapid growth is not wanted in the grasses of a lawn, but in preparing it for laying down let the surface be as much alike in quality as possible, and do not stint the quantity of seed.

If your ground is in condition to raise a good crop of potatoes it will make a good lawn; add about half a ton of bone dust to the acre, harrowing it before sowing the seed. The success of establishing a good lawn depends much on the season and the condition of the ground at the time of growing. A very slight raking-in will protect the seeds much, or a sowing of wood ashes will render them distasteful to birds. Roll-

The best time to sow lawn grass seed is early in the spring, say February or March, or about the latter part of August. We prefer the early spring.

It is proper here to observe that no lawn can be maintained long in good order without successive rollings. Mowing alone will not secure a good bottom without that compression which the roller tends to give. The rolling should be done in the spring before the ground becomes dry.

TO GRASS A BANK OR TERRACE

For each square rod take a pound of lawn grass seed and mix it thoroughly with six cubic feet of good, dry garden loam. Place in a tub and add liquid manure, diluted with about two-thirds of water, so as to bring the whole to the consistency of mortar. The slope must be made perfectly smooth and

VALUABLE TABLES.

CENTAL SYSTEM TABLE.

Some few years ago the seed merchants of the United States and Canada adopted the system of selling and buying grass and many kinds of field seeds by the 100 pounds instead of by the bushel weight. For the convenience of customers we give the following table, showing the number of standard bushels in 100 pounds:

Nursery Stock

WE DESIRE to call your attention to our FINE and COMPLETE LINE of NURSERY STOCK. If you will be needing anything in this line, it will pay you to write us for our Descriptive and Illustrated Catalogue of Nursery Stock.

FOREST TREES—Ash, Maple, Box Elder, Cottonwood, Locust, Walnut, Elm, Mulberry, etc.

FRUIT TREES—The hardiest and best — Apple, Plum, Cherry, Crab, Pear, etc.

SMALL FRUITS—The choicest—Raspberries, Blackberries, Gooseberries, Strawberries, Currants, Grapes, Juneberries, etc.

ORNAMENTAL TREES—Mt. Ash, Birch, Beech, Linden, Chestnuts, Poplars, Weeping Willow, etc.

SHADE TREES—Varieties same as in forest trees. For five years we have been cultivating large blocks of shade trees. We today have the finest lot of trees for the lawn, street, cemetery and park in the northwest.

ROSES—We have the finest line of Roses and Shrubs in the northwest.
